

ARGONAUT AGENTIC

PAYMENT UTILITY FOR A NEW EARTH

V $\equiv$ R T

VALUE EQUIVALENT REVERSE TRANSFER

V $\equiv$ R T Is a **Reverse** VAT for Living The Good Life.

Much of the concern surrounding AI deals with the prospect of millions losing their jobs and the incomes that go with. The reality is that we plainly have *plenty* of work to do (most of all on ourselves) and need the incentives to make them a priority; and as well source the capital required for the necessary investment. What if we could get paid for improving our health and welfare - by choosing organic, low impact, low-carbon solutions to our everyday needs?

Argonaut V $\equiv$ RT is a solution which applies ISO 20022 factor transmission to assess the value of an activity on Social Network Oracles as an equivalent offset to entitlement costs (healthcare, transportation, community safety, child care) incurred by an entity (corporate or sovereign) and stream that value back to an individual's account - an option enabled by emerging on-chain protocols

HEAVILY PROCESSED

HST/GST (VAT)

A lift to the cost of a transaction transmitted to the commonwealth for often reductive and energy-intensive

ORGANIC/ LOW CARBON/IMPACT

V $\equiv$ R T

Assess value of organic and ecologically aligned choices - ones which reduce processing, energy and cost avoided.

Meditate on this...

It's not nothing

♥ 112 BPM · 5.4 KM/H · GPS ✓ · ISO 20022 pacs.008

IoT factors using the ISO 20022 standard send heart rate, motion and other factors to confirm adherence to functional and integrative activities demonstrably proven to alleviate and mitigate costly allopathic choices. These then generate a financial incentive to determine a new trend in behaviour aligning self-interest to community and to ecology.

DUE CONSIDERATION

Mountin' Do

Go tell it on the Mountain: You and your life are a tel - an anthropological mound constructed from a sequence of blocks - transactions each incrementally manifesting a design for life in a deterministic fashion that shows up as a trend in the real world with all the implications of a pebble on a pond. Change is difficult but incentives make them seem possible. One small incentivized change is laid as a foundation for each additional constructive behaviour. All time you're earning a return for a benefit which accrues to you as much as to the community and to the environment.

YOU

Paid in kind

Factored behaviour (walking, meditating, buying and selling product).

ORACLE

Equivalent price

The behaviour is priced against a using a hypothetical counterfactual - the continuation of a determined (trend) pattern.

BACK TO YOU

Streamed income

A balance amounting to the entitlement saving from the community (corporate or sovereign) is distributed

The concept builds on agentic payments and the evolution of the protocols used to send capital across an increasingly single bounded network for attested interaction
